Pre-release 0.13.0

Date of Release: ?? 2023

Scope:

- {??} - —

Details

- [Fixed #326](#) - Failing IT's based on Maven 3.8.7
- [Fixed #329](#) - Upgrade to smpp 5.3.14
- [Fixed #409](#) - Remove superfluous debugging outputs
- [Fixed #410](#) - Document build requirement
- [Fixed #417](#) - Maven 4.0.0 - Failing IT - maven-resources-plugin not defined

Breaking Changes

- [Fixed #277](#) - Remove Deprecated Code. Take a look into the release notes of [Version 0.12.0](#).
- If you have used `@MavenDebug` annotation you have to replace that usage with `@MavenVerbose`. You will get `deprecated warnings` during the compilation.
- [Fixed #379](#) - Deprecated `@MavenDebug`; Replace the usage with `@MavenVerbose`. `@MavenDebug` will be removed with release 0.14.0.
- [Fixed #421](#) - Deprecated the `MavenVersion#UNKNOWN`. If you have used it somewhere you will get a deprecation WARNING during compilation. That should be replaced with `MavenVersion#ANY`. (Usually you shouldn't have used that anyway). `MavenVersion#UNKNOWN` will be removed with release 0.14.0. Also all Maven Version for `M3_0_5` up to `M3_5_4` have been marked deprecated to indicate that those versions are very old and shouldn't be used anymore; Not even in tests (You should upgrade your Maven version)
- [Fixed #359](#) - ITF class level annotations misbehave
 - if you have used `@MavenProfile` annotation on class level with profiles and relied on the behaviour that on a method or a nested class a definition of another `@MavenProfile` replaced all the original profiles during the execution. That behaviour has been changed. Please refer to the users guide about `@MavenProfile` annotation and its particular behaviour. The following example shows the behaviour in release 0.12.0:

```
@MavenProfile({"profile-1", "profile-2", "profile-3"})
class ProfileOnClassIT {

    @MavenTest
    void profile_1_2_3(MavenExecutionResult result) {
        ...
    }

    @MavenTest
```

```

    @MavenProfile("profile-1")
    void profile_1(MavenExecutionResult result) {
        ...
    }
}

```

The way to achieve the same with the release 0.13.0, you have to express is like this:

```

    @MavenProfile({"profile-1"})
    class ProfileOnClassIT {

        @MavenTest
        @MavenProfile({"profile-2", "profile-3"})
        void profile_1_2_3(MavenExecutionResult result) {
            ...
        }

        @MavenTest
        void profile_1(MavenExecutionResult result) {
            ...
        }
    }
}

```

Date of Release: 28. December 2022

Scope:

- [Fixed #284](#) - pom.xml in subfolder is not found or not supported

Details

- [Fixed #226](#) - itf-assertj dependency is missing in README
- [Fixed #210](#) - Removed unused dependency commons-compress.
- [Pull request #211](#) - Add @MavenTest annotation to README example
- [Fixed #230](#) - Get rid of commons-io
- [Fixed #232](#) - Support for custom location and reuse of a Maven project from my resources This is also related to [Fixed #286](#).
- [Fixed #260](#) - Test project's file attributes & links get lost when copied to test target/maven-it Upgraded maven-filtering and maven-artifact-transfer and added explicitly maven-shared-utils to prevent using transitive dependency.
- [Fixed #264](#) - The targetBaseDirectory in MavenProjectResult points to wrong location. Added some tests to prevent the issue.
- [Fixed #278](#) - Enhance list of Maven versions
- [Fixed #279](#) - Typos / Minor Code cleanups
- [Fixed #282](#) - Add missing equals/hashCode for custom assertions.
- [Fixed #285](#) - Add some tests.
- [Fixed #286](#) - Support a way to avoid the requirement for resources-its directory.
- [Fixed #289](#) - @MavenProjectLocation("subdir") Does not work on nested Class
- [Fixed #290](#) - @MavenProjectSources is not usable within another annotation.
- [Fixed #297](#) - Assign @SystemProperty to class / nested class and inherit on all test methods.
- {issue-??} - ?

Breaking Changes

- [Fixed #276](#) - Replace File with Path
 - The return type of the methods `getTargetProjectDirectory()`, `getTargetBaseDirectory()` and `getTargetCacheDirectory()` of the class `MavenProjectResult` has been hanged from `File` into `Path`. That means you have to check your code. It will be obviously getting compile errors if you have used one of the above methods in your own code.
 - The method `Model readProject(File pomFile)` of the class `ProjctHelper` has been marked deprecated and will be removed with release 0.13.0. This means you have to replace the call of that method with the same which has a parameter `Model readProject(Path pomFile)`.
 - Technically the class `ArchiveAssert` extended before from `AbstractAssert<ArchiveAssert, File>` while it now extends `AbstractAssert<ArchiveAssert, Path>` instead.
- [Fixed #281](#) - Lifting Maven minimum version for itf-maven-plugin to Maven 3.2.5+

Pre-release 0.10.0

Date of Release: May 16 , 2021

Scope:

- Refactoring/Code cleanups
 - [Fixed #140](#) - Remove deprecated marked annotation elements and code
 - [Fixed #142](#) - Reduce visibility of classes
 - [Fixed #143](#) - Deprecate ExecutionResult.Error
 - [Fixed #145](#) - Remove not used dependency to testcontainers.
 - [Fixed #150](#) - Make LogoutOutputIT more stable
 - [Fixed #151](#) - Refactor code.
 - [Fixed #156](#) - Remove unused code.
 - [Fixed #173](#) - Improve issue template.
 - [Fixed #174](#) - Improve the output in case of an error.
 - [Fixed #175](#) - Enhance the MavenProjectResult.
 - [Fixed #176](#) - Remove needless import on MavenProjectResult in docs.
 - [Fixed #186](#) - Typo in method name should be isSuccessful.

Enhancements

- [Fixed #180](#) - Enable debugging of plugin while running integration tests.

Details

- [Fixed #128](#) - Add automatic module name.

Breaking Changes

- [Fixed #140](#) - Remove deprecated marked annotation elements and code
- [Fixed #142](#) - Reduce visibility of classes; If you have used the following classes `ApplicationExecutor` or `DirectoryHelper` in your code they have be made invisible for users. No alternative available.
- [Fixed #143](#) - Deprecate `ExecutionResult.Error`; If you have used that directly within your code you should change your code. This is being marked deprecated and will be removed with release 0.11.0.
- [Fixed #175](#) - Enhance the `MavenProjectResult`. Based on the enhancements we have added `getTargetBaseDirectory()` and `getTargetCacheDirectory()`. `getTargetBaseDirectory()` is the same as `getBaseDir()` to keep compatibility in release 0.10.0. The `getBaseDir()` has been marked deprecated and will be removed with release 0.11.0.
- [Fixed #163](#) - You have to change the configuration within your test `pom.xml` file. The configuration to filter the content of the `resources-its` directory.

```
<testResource>
  <directory>src/test/resources-its</directory>
  <filtering>true</filtering>
</testResource>
```

This is not allowed anymore. This means you have to bind the `itf-maven-plugin` with a supplemental goal in your pom file as shown in the following example:

```
<plugin>
<groupId>com.soebes.itf.jupiter.extension</groupId>
<artifactId>itf-maven-plugin</artifactId>
<version>0.10.0</version>
<executions>
  <execution>
    <id>installing</id>
    <phase>pre-integration-test</phase>
    <goals>
      <goal>install</goal>
      <goal>resources-its</goal>
    </goals>
  </execution>
</executions>
</plugin>
```

You have to add the supplemental goal `resources-its` in your configuration.

- [Fixed #186](#) - based on a typo in the method name `isSuccesful()` of the class `MavenExecutionResult` instead of `isSuccessful()` the method `isSuccesful()` is marked deprecated and should not being used anymore and will be removed with release 0.11.0. Replace it with `isSuccessful()`.
- [Fixed #177](#) - Move creation of target structure into `beforeEach`. This change could influence your integration tests. So please check your build. If you have issues please report them.

Pre-release 0.9.0

Date of Release: August 12, 2020

Scope:

- Refactoring/Code cleanups
 - [Fixed #130](#) - Moving Conditions into separate package
 - [Fixed #131](#) - Reduce visibility of MavenITExtension.
 - [Fixed #132](#) - Remove StringInterpolator from public API
 - [Fixed #134](#) - Maven test should use options = "--errors" by default
 - [Fixed #135](#) - Split properties of @MavenTest across multiple (@Repeatable) annotations
 - [Fixed #136](#) - Remove `debug` from MavenJupiterExtension annotation
 - [Fixed #138](#) - Rename `MavenOptions` into `MavenCLIOptions`.

Details

- [Fixed #139](#) - Typos in License Text

Breaking Changes

- [Fixed #135](#) - Split properties of @MavenTest across multiple (@Repeatable) annotations
 - Deprecate the `@MavenTest` annotation elements `goals`, `activeProfiles`, `options`, `systemProperties`, `debug` with release **0.9.0**.
 - Add replacements `@MavenGoal`, `@MavenProfile`, `@MavenOption` and `@SystemProperty`.
 - This means all the annotation elements of `@MavenTest` will be removed with release **0.10.0**.
 - You have to migrate your code accordingly otherwise you will face compile errors with the upgrade to release **0.10.0**.
 - The users guide has been updated to represent only the new annotations and no usage of annotation elements.
 - Changed the users guide accordingly to the new annotations.
- [Fixed #130](#) - Moving Conditions into separate package
 - The annotations `DisabledForMavenVersion` and `EnabledForMavenVersion` have been moved from `com.soebes.itf.jupiter.extension` into `com.soebes.itf.jupiter.extension.condition` package. The consequence is that you have to change your imports if you use them.

- [Fixed #138](#) - Rename `MavenOptions` into `MavenCLIOptions`.
- [Fixed #132](#) - Remove `StringInterpolator` from public API If you have used it you have to remove the usage. No replacement available.
- [Fixed #136](#) - Remove `debug` from `MavenJupiterExtension` annotation If you have used to turn on debugging via the annotation `@MavenJupiterExtension` this means you need to change your tests and use the `@MavenTest(options=MavenCLIOptions.DEBUG)` to get the same behaviour. Related to [Fixed #135](#) you have to replace it with `@MavenOption(MavenCLIOptions.DEBUG)` or you can use `@MavenDebug`.
