Pre-release 0.13.1

Date of Release: December 29, 2023

Breaking Changes * A change in 0.13.0 broke the compatibility with Maven before version 3.9.0.

- Fixed #445 - itf-maven-plugin:0.13.0:install fails due to missing class ArtifactIdUtils
  ◦ Restored compatibility with Maven before 3.9.0
Pre-release 0.13.0

Date of Release: December 27, 2023

Details

- Fixed #326 - Failing IT's based on Maven 3.8.7
- Fixed #329 - Upgrade to smpp 5.3.14
- Fixed #409 - Remove superfluous debugging outputs
- Fixed #410 - Document build requirement
- Fixed #417 - Maven 4.0.0 - Failing IT - maven-resources-plugin not defined

Breaking Changes

- Fixed #277 - Remove Deprecated Code. Take a look into the release notes of Version 0.12.0.
- If you have used @MavenDebug annotation you have to replace that usage with @MavenVerbose. You will get deprecated warnings during the compilation.
- Fixed #379 - Deprecated @MavenDebug; Replace the usage with @MavenVerbose. @MavenDebug will be removed with release 0.14.0.
- Fixed #421 - Deprecated the MavenVersion#UNKNOWN. If you have used it somewhere you will get a deprecation WARNING during compilation. That should be replaced with MavenVersion#ANY. (Usually you shouldn't have used that anyway). MavenVersion#UNKNOWN will be removed with release 0.14.0. Also all Maven Version for M3_0_5 up to M3_5_4 have been marked deprecated to indicate that those versions are very old and shouldn't be used anymore; Not even in tests (You should upgrade your Maven version)
- Fixed #359 - ITF class level annotations misbehave
  - if you have used @MavenProfile annotation on class level with profiles and relied on the behaviour that on a method or a nested class a definition of another @MavenProfile replaced all the original profiles during the execution. That behaviour has been changed. Please refer to the users guide about @MavenProfile annotation and it particular behaviour. The following example shows the behaviour in release 0.12.0:
The way to achieve the same with the release 0.13.0, you have to express is like this:

```java
@MavenProfile("profile-1")
class ProfileOnClassIT {

  @MavenTest
  @MavenProfile("profile-2", "profile-3")
  void profile_1_2_3(MavenExecutionResult result) {
      ...
  }

  @MavenTest
  void profile_1(MavenExecutionResult result) {
      ...
  }
}
```

Pre-release 0.12.0

Date of Release: 28. December 2022

Scope:

• Fixed #284 - pom.xml in subfolder is not found or not supported

Details

• Fixed #226 - itf-assertj dependency is missing in README
• Fixed #210 - Removed unused dependency commons-compress.
• Pull request #211 - Add @MavenTest annotation to README example
• Fixed #230 - Get rid of commons-io
• Fixed #232 - Support for custom location and reuse of a Maven project from my resources This is also related to Fixed #286.
• Fixed #260 - Test project's file attributes & links get lost when copied to test target/maven-it Upgraded maven-filtering and maven-artifact-transfer and added explicitly maven-shared-utils to prevent using transitive dependency.
• Fixed #264 - The targetBaseDirectory in MavenProjectResult points to wrong location. Added some tests to prevent the issue.
• Fixed #278 - Enhance list of Maven versions
• Fixed #279 - Typos / Minor Code cleanups
• Fixed #282 - Add missing equals/hashCode for custom assertions.
• Fixed #285 - Add some tests.
• Fixed #286 - Support a way to avoid the requirement for resources-its directory.
• Fixed #289 - @MavenProjectLocation("subdir") Does not work on nested Class
• Fixed #290 - @MavenProjectSources is not usable within another annotation.
• Fixed #297 - Assign @SystemProperty to class / nested class and inherit on all test methods.
• {issue-??} - ?

Breaking Changes

• Fixed #276 - Replace File with Path
  ◦ The return type of the methods `getTargetProjectDirectory()`, `getTargetBaseDirectory()` and `getTargetCacheDirectory()` of the class `MavenProjectResult` has been hanged from `File` into `Path`. That means you have to check your code. It will be obviously getting compile errors if you have used one of the above methods in your own code.
The method `Model readProject(File pomFile)` of the class `ProjetHelper` has been marked deprecated and will be removed with release 0.13.0. This means you have to replace the call of that method with the same which has a parameter `Model readProject(Path pomFile)`.

Technically the class `ArchiveAssert` extended before from `AbstractAssert<ArchiveAssert, File>` while it now extends `AbstractAssert<ArchiveAssert, Path>` instead.

Pre-release 0.10.0

Date of Release: May 16, 2021

Scope:

• Refactoring/Code cleanups
  ◦ Fixed #140 - Remove deprecated marked annotation elements and code
  ◦ Fixed #142 - Reduce visibility of classes
  ◦ Fixed #143 - Deprecate ExecutionResult.Error
  ◦ Fixed #145 - Remove not used dependency to testcontainers.
  ◦ Fixed #150 - Make LogoutputIT more stable
  ◦ Fixed #151 - Refactor code.
  ◦ Fixed #156 - Remove unused code.

  ◦ Fixed #174 - Improve the output in case of an error.
  ◦ Fixed #175 - Enhance the MavenProjectResult.
  ◦ Fixed #176 - Remove needless import on MavenProjectResult in docs.
  ◦ Fixed #186 - Typo in method name should be isSuccessful.

Enhancements

• Fixed #180 - Enable debugging of plugin while running integration tests.

Details

• Fixed #128 - Add automatic module name.

Breaking Changes

• Fixed #140 - Remove deprecated marked annotation elements and code
• Fixed #142 - Reduce visibility of classes; If you have used the following classes
  ApplicationExecutor or DirectoryHelper in your code they have be made invisible for users. No
  alternative available.
• **Fixed #143** - Deprecate ExecutionResult.Error; If you have used that directly within your code you should change your code. This is being marked deprecated and will be removed with release 0.11.0.

• **Fixed #175** - Enhance the MavenProjectResult. Based on the enhancements we have added getTargetBaseDirectory() and getTargetCacheDirectory(). getTargetBaseDirectory() is the same as getBaseDir() to keep compatibility in release 0.10.0. The getBaseDir() has been marked deprecated and will be removed with release 0.11.0.

• **Fixed #163** - You have to change the configuration within your test pom.xml file. The configuration to filter the content of the resources-its directory.

```xml
<testResource>
  <directory>src/test/resources-its</directory>
  <filtering>true</filtering>
</testResource>
```

This is not allowed anymore. This means you have to bind the itf-maven-plugin with a supplemental goal in your pom file as shown in the following example:

```xml
<plugin>
  <groupId>com.soebes.itf.jupiter.extension</groupId>
  <artifactId>itf-maven-plugin</artifactId>
  <version>0.10.0</version>
  <executions>
    <execution>
      <id>installing</id>
      <phase>pre-integration-test</phase>
      <goals>
        <goal>install</goal>
        <goal>resources-its</goal>
      </goals>
    </execution>
  </executions>
</plugin>
```

You have to add the supplemental goal resources-its in your configuration.

• **Fixed #186** - based on a typo in the method name isSuccesful() of the class MavenExecutionResult instead of isSuccessful() the method isSuccesful() is marked deprecated and should not being used anymore and will be removed with release 0.11.0. Replace it with isSuccessful().

• **Fixed #177** - Move creation of target structure into beforeEach. This change could influence your integration tests. So please check your build. If you have issues please report them.

**Reporter of issues**

• Vincent Privat
  - **Fixed #197** - README example does not compile.

    - Changed the users guide accordingly to the new annotations.

- Fixed #130 - Moving Conditions into separate package
  - The annotations DisabledForMavenVersion and EnabledForMavenVersion have been moved from com.soebes.itf.jupiter.extension into com.soebes.itf.jupiter.extension.condition package. The consequence is that you have to change your imports if you use them.

- Fixed #138 - Rename MavenOptions into MavenCLIOptions.

- Fixed #132 - Remove StringInterpolator from public API If you have used it you have to remove the usage. No replacement available.

- Fixed #136 - Remove debug from MavenJupiterExtension annotation If you have used to turn on
debugging via the annotation @MavenJupiterExtension this means you need to change your tests and use the @MavenTest(options=MavenCLIOptions.DEBUG) to get the same behaviour. Related to Fixed #135 you have to replace it with @MavenOption(MavenCLIOptions.DEBUG) or you can use @MavenDebug.
